Prof. dr. M.Wedel

Beoordelingscommissie: Prof. dr. A.Ansari

Prof. dr. B.Bronnenberg

Prof. dr. P.Verhoef

Acknowledgements

This dissertation was written during my PhD training in the Marketing Department of the University of Groningen, the Netherlands between September 2005 and December 2009. Many people participated in this process directly and indirectly and I would like to express my gratitude to them.

First of all, I would like to thank my first supervisor Tammo Bijmolt for professionalism, encouragement and the ability to always find time to discuss my new ideas. Tammo's support, especially during the early stages of my PhD training, when I was choosing a topic to pursue, was very valuable. Also, I would like to thank my second supervisor Michel Wedel for his excellence in research and for his personality. Michel's incredible efficiency and productivity influenced and inspired me a lot. I sincerely believe that Tammo and Michel are among the best supervisors one can ever have and I am proud to be a student of such eminent scholars.

I am also very grateful to Paul Elhorst who, in some degree, influenced my decision to devote my research to spatial modeling. In early 2006, together with Tammo Bijmolt, they formed and led a "spatial econometrics group" where during informal meetings with other PhD students we discussed not only theoretical issues but the possible applications of spatial modeling in marketing.

I express my gratitude to all members of the Marketing Department of the University of Groningen for being part of the excellent team which shaped me as a researcher. Among others I would like to thank Peter Leeflang, Tammo Bijmolt, Peter Verhoef and Erjen van Nierop for sharing their knowledge with me. Also, I would like to thank the members of the reading committee, Professors Asim Ansari from Columbia University, USA; Bart Bronnenberg from Tilburg University, the Netherlands; and Peter Verhoef from the University of Groningen, the Netherlands, for their willingness to read my dissertation.

In any organization one has to deal with many administrative issues and some people helped me to do that efficiently and with minimum time loss. I am grateful to our previous and current PhD coordinators Dirk Pieter van Donk and Martin Land for their openness and readiness to help in any situation. In particular, I am grateful to Martin for arranging printing of this thesis in color. Also, I would like to thank the previous and current directors of our SOM research

school, Jacob de Haan and Tammo Bijmolt, the school's research coordinator Rina Koning, the SOM secretaries Ellen Nienhuis and Astrid Beerta, and the secretaries of the Marketing Department Hanneke Tamling and Frederika Fokkens.

My special thanks to Vernon Murray and Julia Porter for pleasant formal and informal discussions and help with proofreading the Introduction of this dissertation; Tammo Bijmolt for translating some parts of it in Dutch; and Auke Hunneman for proofreading the Dutch summary of the thesis.

I would like to thank all of my friends from the University, and outside of it, for good friendship, support and just for having good time. Many thanks to Umed and Adiba Temurshoev, Umut and Burcu Konus, Auke Hunneman, Ernst Osinga, Alessio Delre, Adriana Krawczyk, Anton Sugonyako, Hans Risselada and others.

I express my gratitude to my mother Natalya Stakhovych, my father Leonid Stakhovych and my younger sister Lyudmyla Stakhovych for constant moral support and for believing in me. I am obliged a lot to my parents for my success and my achievements, as their input in my development during childhood and school times was invaluable.

Finally, I would like to thank my lovely wife Oksana Stakhovych for all the help and support she gave me. She is the only person who observed the process of writing my dissertation on a daily basis. I am so grateful to you, Oksana, for sharing with me the joy of my success, but even more importantly, I am grateful to you for your support and encouragement during the times when not everything went smoothly. Thank you for understanding my feelings when “the model did not converge” and thank you for your patience for observing me in the evenings trying to solve these problems at the expense of our time together. Dear Oksana, thank you for your unconditional love and for being supportive in any situation.

Stanislav Stakhovych

April 2010

Groningen, the Netherlands
